Comprehension:

Read the following passage and answer the given questions

Man has come a long way since his arrival on this planet, adapting and using his intelligence to prosper and increase in numbers. Today, he is the dominant species on Earth, thanks in part to his curiosity and exploratory urge. While much of the Earth has been explored, Man's thirst for knowledge and discovery has led him to look towards the expanse above his head - the skies above, or what is commonly referred to as space.

The allure of space has always challenged Man's curiosity, as it offers the possibility of discovering new planets and unknown worlds and solving problems such as the increasing population. The Cold War between America and Russia in the 1960s was not just a race for military supremacy, but also a race for national pride, as each nation aimed to be the first to land a man on the Moon. The Apollo mission, which successfully landed the first man on the Moon in 1969, marked a sweet victory for the Americans. However, financial constraints have led to a drop in space travel for strategic and scientific purposes.

Despite this setback, space continues to hold much promise for Man. Recent planetary probes and cameras have found evidence of water on Mars, raising hopes of the existence of life there. Space stations and the possibility of long-term habitation in space offer the potential for Man to live and work in space, especially as more areas on Earth become uninhabitable due to pollution and desertification.

Telecommunications, military, and weather satellites provide enormous benefits to nations, while space laboratories may yield important scientific discoveries. Additionally, the possibility of finding aliens in space remains the ultimate dream of many scientists.

In conclusion, Man has almost fully explored his planet, and space remains the final frontier for him to explore. With endless possibilities and the potential for groundbreaking discoveries, the exploration of space is undoubtedly the most exciting endeavor that Man can undertake in the 21st century
