Comprehension:

Read the given passage and answer the questions that follow.

India posted record growth in coal production at more than 892 million tonne (mt) in 2022-23 from 778 mt in 2021-22 and thus, India's coal production grew by 14.65 per cent on a Y-o-Y foundation to hit an all-time high of 892.21 million tonnes aided by Coal India's (CIL) record production in addition to captive and business mines.

"This is a historic moment for the coal sector. I congratulate all the coal warriors and stakeholders for the record growth. Despite the stiff targets, Coal India, SCCL, along with captive and commercial mines have produced more than 892 mt of coal in FY23 (Financial year 23). CIL has done a tremendous job by surpassing 700 mt this year," Coal Minister Pralhad Joshi informed reporters.

CIL's production rose by virtually 13 per cent to 703.20 mt in FY23, whereas output by captives and business mines grew by 34.59 per cent in FY23 to hit 121.88 mt. The production from Singareni Collieries Company (SCCL) rose a modest 3.25 per cent Y-o-Y to 67.14 mt.

Recently, the minister said that India has adequate coal reserves and the country aims to begin exporting the dry fuel by 2024-25. From a net importer of coal, India is moving towards becoming a net exporter of non-coking coal, he said.
The demand for coal elevated to 1,027.92 mt in FY22 from 906.13 mt in FY21. For FY23, demand was assessed at 1,087 mt.

Given the anticipated rise in coal demand as a consequence of financial development, the home output is proposed to be elevated to 1,017 mt in FY24, which is further expected to enhance by 9-10 per cent in FY25. As coal is India's main supply, the demand will proceed with a possible peak in the range of 1.1-1.3 billion tonnes by 2030. Coal India is expected to produce one billion tonnes by 2025-26.

SubQuestion No : 22

Q.22 Match the exact/anticipated coal output with the financial year.
